

Press Release (India):

New Horizons in Water Science – ‘The Evidence for Homeopathy’ 1, Wimpole Street home of the Royal Society of Medicine - London 14th July 2018.

British Lord and Medical Homeopath, launches astonishing Ground Breaking World Class International Scientific Seminar - supporting undisputed credibility for Homeopathy.

Ward-Atherton opening the Seminar in London that sent ‘shock waves’ to the established scientific community around the globe

After more than a year of planning, **(Lord) Aaron Kenneth Ward-Atherton**, a Consultant for Integrated Healthcare and his team in the UK, launched a huge international scientific seminar to prove Homeopathy has a scientific basis - which has sent a **‘shock wave’** around the globe.

Delegates attending came from more than 20 countries to hear 6 prominent speakers deliver **incredible scientific evidence to support Homeopathy**. There were two Nobel Laureates amongst the scientific community presenting, at the Conference at the Royal Society of Medicine, under the auspices of 1 Wimpole Street London.

- **Nobel Laureate Professor Emeritus Brian Josephson** (Theory of Condensed Matter, Cavendish Laboratory, University of Cambridge) was awarded his Nobel prize in Physics at the age of 22 for his pioneering work on superconductivity and quantum tunnelling. Fifty six years on, he set the scene for the conference by suggesting that the current ‘matching’ theory for how two molecules (e.g. bioactive molecules and receptor molecules) communicate is incorrect. He argues that electromagnetic signals and quantum theory provide more likely, or at least additional, explanations.
- **Nobel Laureate Professor Luc Montagnier** was co-awarded a Nobel prize in Medicine in 2008 for the discovery of HIV. Professor Montagnier states that electromagnetic signals can be transduced in highly diluted aqueous solutions originally containing some bacterial or viral DNA. Montagnier has found that agitation of preparations during their dilution (= succussion in homeopathy) was found to be essential for this transduction.

The monumental weekend began with a spectacular welcome dinner held in the Cholmondeley Room and Terrace at the prestigious House of Lords in London, hosted by the **Lord Cashman CBE** representing the House of Lords, and Co-hosted by practising Medical Homeopath **Aaron Kenneth Ward-Atherton** who holds the titles **Lord of Witley&Hurcott Worcestershire**. Their Lordships were supported by the prominent Parliamentarian **David Tredinnick MP** who is a long term and committed supporter of Homeopathy in the British Parliament, and additionally by the 7th generation direct descendent of Dr Samuel Hahnemann – **Mr Charles Tankard-Hahnemann**.

International guests included key representatives of the **Government of India**, including **Mr Amit Sharma** attending the dinner on behalf of Mr Y K Sinha, High Commissioner for India in London, and attending from India, **Dr Raj Manchanda** Director General for the **Central Council for Research in Homeopathy(CCRH)** and **Professor Jayesh Bellare** Institute Chair Professor of Chemical Engineering from Bombay.

Also attending was **Dr Menachem Oberbaum**, Director of the Center for Integrated Medicine at the **ShaareZedek Medical Center Jerusalem**, representing Israel's recent government agreement with India to formally research Homeopathy.

Left to Right – Dr Menachem Oberbaum (Director of the Center for Integrated Medicine Jerusalem), Aaron Ward-Atherton (Co-Host and Originator of ‘New Horizons in Water Science’ Seminar London), Mr Amit Sharma (representing The Indian High Commission London), Dr Raj Manchanda (Director General for the Central Council for Research in Homeopathy Indian - CCRH) and Mr Gideon Klaus (Executive Director for The British Israel Chamber of Commerce).

The Seminar Originator and Organiser, **Aaron Ward-Atherton**, invited **Dr. Peter Fisher** (Physician to HRH Queen Elizabeth) to Chair the afternoon whilst Lord Ward-Atherton chaired the morning session. The event was undoubtedly a world first for the focus on Water Science and the probable mechanism that underpins the beneficial effects seen in Homeopathic treatment. The line up of international scientists from Russia, the United States and Europe included:

Professor Jerry Pollack (Pollack Laboratory, University of Washington, Seattle) showed that water within living systems largely exists not as H₂O, but as structured matrices composed of H₃O₂ molecules ('exclusion zone water' or 'EZ water', for more information, see separate article) 'EZ water': the water that makes us and all other life. This structured water is negatively charged and acts like a battery that can do work within the body. Along with ethanol that can also form exclusion zones, EZ water also has a great capacity to retain information; this could potentially be exploited and could surpass the data storage capacity of today's silicon 'chips'.

Professor Jerry Pollack – World Class expert on Water Science speaking at the Seminar

Professor Vladimir Voeikov (Chair of Bioorganic Chemistry, Faculty of Biology, Lomonosov Moscow State University) and his lab have shown how signatures could be left by biologically active substances as high-energy, reactive oxygen species (ROS). These bio-energetic signals may represent what homeopaths or herbalists refer to as 'vital force' and may contribute to the observed property of 'memory' in water.

Professor Voeikov also discussed the work of his colleague, **Professor Alexander Kononov** (Russian Academy of Sciences). The work suggests that memory could be retained by nano-sized assemblies of water molecules (referred to as 'nanoassociates') created around bioactive molecules long after their removal

Professor Jayesh Bellare head of the Department of Chemical Engineering, Indian Institute of Technology, explained that his team are able to detect nanoparticles of the starting materials or their aggregates in even the most diluted homeopathic products (manufactured according to the Homoeopathic Materia Medica). He attributes some of the effects (even if they were electromagnetic or quantum in action) to these nanoparticles.

Dr Robert Verkerk, Founder, executive and scientific director for Alliance for Natural Health International explained "Over the last few decades, the incidence of preventable diseases has increased to such an extent that they now present the greatest single burden on healthcare systems in most countries, especially developed ones. The NHS in the UK is presently breaking under the strain. Yet there's very little consensus on how this situation can be remedied. It's also set to get worse without a sea change in approach. This is the central tenet of our blueprint for health system sustainability, the principles of which I introduced at the conference. We need a unified language in which all health professionals *and* citizens can communicate that is built on a common understanding of the key elements of health and resilience that need to be brought into balance to provide a terrain that is not conducive to chronic, preventable diseases. We need to focus much more on health creation and put the individual firmly in the driving seat of his or her health. We'll be publishing our position paper for the UK government in September and intend to establish trials that evaluate outcome trajectories when citizens are empowered, engaged and have access to participatory and collaborative support from a diverse network of health professionals."

Dr Robert Verkerk an international visionary for future more sustained global Health

The main theme of the seminar, which concerned water science, revealed many anomalies of water have long been known and it seems we're just meant to accept the anomalies and not concern ourselves that there are few adequate explanations.

The speakers raise additional anomalies, which some will believe and others will choose to ignore. What's very interesting is that there are persistent efforts in society to marginalise scientists with a contrary view to the status quo.

French immunologist **Dr Jacques Benveniste** (in whose memory the conference was held) was such a scientist. In attempting to demonstrate that water can retain a memory of biologically active substances even when they are no longer present. This conference was something of a celebration of what has happened in the wake of Benveniste's discoveries, following his death in 2004 it showed just how elements of the science have moved on, regardless of establishment pressure against this kind of research.

Whatever the opponents of homeopathy argue, the clinical effect has been amply demonstrated. Could this new evidence from the science of water reveal a likely, albeit, complex mechanism – or possibly more likely – a series of parallel mechanisms? And could an understanding of these mechanisms provide the missing piece in the logic pathway required to shift the medical establishment's perceptions about the usefulness of Homeopathy for human or animal health?

Ward-Atherton concluded "The consensus of all those who attended this International Seminar I arranged with my team can be summed up very simply in a few words...

'Aim not for what is – but for what could be'."
